

Customer Shopping Behavior Analysis

Project Overview

This project analyzes customer shopping behavior using transactional data from 3,900 purchases across various product categories. The goal is to uncover insights into spending patterns, customers segments, product preferences, and subscription behavior to guide strategic business decisions.

Dataset Summary

- Rows : 3,900
- Columns : 18
- **Key Features**
 - Customer Demographics (Age, Gender, Location, Subscription Status).
 - Purchase Details (item *Purchased* , *Category* , *Purchase Amount* , *Season* , *Size* , *Color*)
 - Shopping Behavior (*Discount Applied* , *Promo Code Used* , *Previous Purchases*, *Frequency of Purchases*, *Review Rating*, *Shipping Type*)
 - Missing Data : 37 values in Review Rating Column

Exploratory Data Analysis Using Python

We began with data preparation and cleaning in Python:

- **Data Loading** : Imported the dataset using pandas.
- **Initial Exploration** : Used `df.info()` to check structure and `.describe()` for summary statistics.

	Customer ID	Age	Gender	Item Purchased	Category	Purchase Amount (USD)	Location	Size	Color	Season	Review Rating	Subscription Status	Shipping Type	Discount Applied	Promo Code Used	Previous Purchases	Payment Method	Frequency of Purchases
count	3900.000000	3900.000000	3900	3900	3900	3900.000000	3900	3900	3900	3900	3863.000000	3900	3900	3900	3900	3900.000000	3900	3900

- **Missing Data Handling** : Checked for null values and imputed missing values in the `Review Rating` Column using the median rating of each product category.
- **Column Standardization** : Renamed columns to **snake case** for better readability and documentation.
- **Feature Engineering** :
 - Created `age_group` column by binning customers ages
 - Created `purchase_frequency_days` column from purchase data.
 - **Data Consistency Check** : Verified if `discount_applied` and `promo_code_used` were redundant, dropped `promo_code_used` .
 - **Database Integration** : Connected Python script to PostgreSQL and loaded the cleaned data into the database for SQL analysis.

Data Analysis using SQL (Business Transactions)

We performed structured analysis in PostgreSQL to answer key business questions:

1. **Revenue by Gender** : Compared total revenue generated by male vs. female customers.

gender	revenue
Female	75191
Male	157890

2. **High Spending Discount Users** : Identified customers who used discounts but still spent above the average purchase amount.

```
with info as (
  select customer_id, purchase_amount
  from customers
  where discount_applied = 'Yes' and purchase_amount ≥ (
    select AVG(purchase_amount)
    from customers
  )
) select count(*) total_customer_buying_above_average, sum(purchase_amount) total_amount
from info;
```

Result was too large to place here so just count with total sum is attached here

total_customer_buying_above_average	total_amount
839	66942

3. **Top 5 Products by Rating** — Found products with the highest average review ratings.

item_purchased	Average Product Rating
Gloves	3.86
Sandals	3.84
Boots	3.82
Hat	3.80
Skirt	3.78

4. **Shipping Type Comparison** — Compared average purchase amounts between standard and express shipping

shipping_type	average_amount
Standard	58.46
Express	60.48

5. **Subscribers vs. Non-Subscribers** - Compared average spend and total revenue across subscription status.

subscription_status	total_customers	avg_spend	total_revenue
Yes	1053	59.49	62645.00
No	2847	59.87	170436.00

6. **Discount-Dependent Products** — Identified 5 Products with the highest percentage of discounted purchases.

item_purchased	discount_rate
Hat	50.00
Sneakers	49.66
Coat	49.07
Sweater	48.17
Pants	47.37

7. **Customer Segmentation** : Classified customers into New, Returning, and Loyal segments based on purchase history.

customer_segment	Number of Customers
Loyal	3116
New	83
Returning	701

8. **Top 3 Products per Category** — Listed the most purchased products within each category.

item_rank	category	item_purchased	total_orders
1	Accessories	Jewelry	171
2	Accessories	Sunglasses	161
3	Accessories	Belt	161
1	Clothing	Blouse	171
2	Clothing	Pants	171
3	Clothing	Shirt	169
1	Footwear	Sandals	160
2	Footwear	Shoes	150

item_rank	category	item_purchased	total_orders
3	Footwear	Sneakers	145
1	Outerwear	Jacket	163
2	Outerwear	Coat	161

9. **Repeat Buyers & Subscriptions** — Checked whether customers with >5 purchases are more likely to subscribe.

subscription_status	repeat_buyers
No	2518
Yes	958

10. **Revenue by Age Group** : Calculated total revenue contribution of each age group.

age_group	total_revenue
Young_Adult	62143
Middle_Aged	59197
Adult	55978
Senior	55763

5. Dashboard in Power BI

Finally, we built an interactive dashboard in Power BI to present insights visually.

6. Business Recommendations

- **Boost Subscriptions** — Promote exclusive benefits for subscribers.
- **Customer Loyalty Programs** — Reward repeat buyers to move them into the "Loyal segment".
- **Product Positioning** — Highlight top-rated and best-selling products in campaigns.
- **Targeted Marketing** — Focus efforts on high-revenue age groups and express-shipping users.
